

The free download of G.C. Kent's Comparative Anatomy of Vertebrates (ZIP) is a subject-specific study of the animal kingdom and how its various species interact with one another in their natural habitats, and how they interact with humankind.

The current price is \$30.00 USD for the e-book version and the original paper version (hardcover) for \$72.00 USD . The paper book version of this book has been out of print for many years, but hasn't been lost from the public domain: it is still available on amazon.com and other online shops that sell old titled books and science publications.
