Free Lesson Plans Pdf It is commonly used for more serious threats to life such as heart attacks, neurologic emergencies, pulmonary embolism, perioperative peritonitis, and gastric hemorrhage. With the development of these techniques, hypothermia has been used increasingly to induce neuroprotection for cerebral ischemia. In the presence of infection, hypothermia is less advantageous than normothermia because the acid-base status is changed with the development of a fever. The precise mechanism by which hypothermia promotes neuronal survival is not fully understood.
