Reticulocytes in anemia of chronic disease: a review. Anemia is very common in patients with chronic kidney disease (CKD). Erythropoiesis-stimulating agents (ESAs) have demonstrated efficacy and safety for the treatment of anemia in CKD. This article reviews the pathogenesis and treatment of anemia of CKD. The heterogeneity of anemia in CKD is more complex than has been recognized. Reticulocytes have emerged as a key pathophysiological component of anemia in CKD. They may be derived from erythropoiesis of the erythroid precursors from the bone marrow, and they may be derived from erythropoiesis in the bone marrow, and they may be derived from erythropoiesis
