

Category: Borland Software Category: Embedded databases Category: Integrated development environments Category: Pascal software Q: How to read all line in a file in specific order in python? I have a file named myfile.txt. The content of myfile.txt is: aaa.txt bbb.txt I am using the next code to load it into a dictionary: with open("myfile.txt") as file: for line in file: mydict[line.strip()]=1 Now I want to read all the lines in myfile.txt, but in a specific order. for example, the order of read is: line1: "aaa.txt" line2: "bbb.txt" line3: "ccc.txt" line4: "ddd.txt" ... The output for the dictionary will be: mydict={'aaa.txt': 1, 'bbb.txt': 1, 'ccc.txt': 1, 'ddd.txt': 1, ...} How can I do this? A: Here is my solution: read_lines_order = ['bbb.txt', 'ccc.txt', 'ddd.txt', 'aaa.txt'] read_lines_file = open('myfile.txt') for line in read_lines_file: if line.strip().endswith('.txt'): mydict[line.strip()]=1 read_lines_file.close() Joaquin Molla Joaquin Molla (1887–1956) was a Spanish geographer and cartographer, active during the mid 20th century. He was the director of the National Cartographic Institute and leader of the National Cartographic Council. Molla was born in Almeria and died in Madrid.
