Mimosyne and Enceladus: the signatures of an origin in the Galactic disk. A model for the dynamics of Mimas is proposed that postulates a Jovian origin and an extended, high-velocity trajectory through the disk. From a comparison of Mimas orbit to the kinematic properties of the giant planets and their satellites, it is suggested that Mimas was originally a member of the Jovian Trojan cloud, which was subsequently pushed outward by Jupiter on a trajectory that carried it through the inner Solar System. Evidence is also provided that Mimas has moved significantly through the gravitational influence of Saturn, and, in a reversal of our original trajectory, has returned to the inner Solar System. The orbital properties of the inner satellites and the Galilean satellites are correlated and, in contrast to earlier ideas, it is concluded that Enceladus' orbit was not set by the effect of Mimas on Saturn's motion. Rather, it is suggested that Enceladus' orbit is determined by the tidal effect of the giant planets on a flattened, primordial, inner satellite disk. If I had to summarize it in one sentence, it would be that with their traditional products the attention to safety is at a minimum and with their high-end more. Which product class do you consider to have higher attention to safety and thus, more features and accessories? A: ba244e880a
