A: your code is wrong. Its searching directories and such and not finding it. try finding the file inside a directory that's on your search path I used to do it this way and have done it many times. // Your code will need to change DirectoryInfo di = new DirectoryInfo(@"C:\Users\Oscar\Desktop\TheMusic"); // if u have a folder that contains the file you want to find, // this code will search all sub directories and find the file you want to find. // It will then return the full path of the file to your variable FileInfo fi = di.GetFiles("\*.rar")[0]; // only returns the first file to match the criteria you give in the "\*.rar" string filepath = fi.FullName; // returns the full path of the file with a full path of C:\Users\Oscar\Desktop\TheMusic\example.rar The reason i know that it is because the way you're attempting to access the file is incorrect. I'm guessing your code is trying to get a file from a path like this... FileStream stream = new FileStream(@"C:\Users\Oscar\Desktop\TheMusic\example.rar", FileMode.Open, FileAccess.Read); From the above code you need to change the FileAccess.Read to FileAccess.ReadWrite. FILE\_READ\_DATA | FILE\_READ\_ACCESS = 0x01 FILE\_READ\_WRITE | FILE\_WRITE\_ACCESS = 0x02 FILE\_WRITE\_DATA | FILE\_WRITE\_ACCESS = 0x04 The above code explains the bit mask that you need to use and I think it should help you out. EDIT From here your code should work. DirectoryInfo di = new DirectoryInfo(@"C:\Users\Oscar\Desktop\TheMusic"); FileInfo fi = di.GetFiles("\*.rar")[0]; string filepath = fi.FullName; FileStream stream = new FileStream(filepath, FileMode.Open, FileAccess.ReadWrite); The effect of a chemical delivery system on the penetration of doxorubicin into brain tissue.
