WordPress theme designers should take note. The AWPCP plugin has been designed to make it easy to develope responsive themes, so you can use the plugin as a tool in your design workflow, or as a means of testing responsive design issues. This is something you might find in this post. A: WordPress is not a Content Management System. It is a CMS. It manages the static content of your website like HTML pages, images, CSS, Javascript, etc. If you want to edit CSS, images, Javascript files, create new HTML pages, then you use a Content Management System. A Content Management System is a Software that allows you to publish the static content of your website (HTML, Javascript, images, CSS files, etc) and WordPress is one of them. Some CMS offer more (e.g. Drupal, Joomla), others (like WordPress) is more limited. You could add static elements to your WordPress website using the Widget system. Finally, another CMS are CMS that can be used for Static Website, like WordPress. WordPress is not a Content Management System it's a website framework. You can't manage the static elements that are part of the website using the WordPress platform, you can only manage the elements that are part of the WordPress install. The best way of thinking of WordPress is that it's a framework

that allows you to write plugins to extend it. A content management system is a tool for managing the static content on your website. It usually includes features like CKEditor or TinyMCE for writing posts, a full RSS feed (if you're using WordPress as a CMS, not as a blog engine), and the ability to manage a site's theme. WordPress is a very common CMS, but it's not the only one. Joomla is a commercial CMS which is geared more towards enterprise-level usage than the desktop usage of WordPress. Drupal is a very lightweight CMS, and can be used on just about anything you want. The key thing to remember is that CMS's are tools and nothing more. If you really want to learn the ins and outs of them, start working on your own website. Don't be afraid to use Wordpress. You can use it to build a static website on its own if you like, but be warned - it's not hard. There are a lot of free resources online for
