Participants in the Miners' Strike of 1984-85. (Photo: Daily Independent, 1985) The May 4 massacre was the culmination of a struggle led by the Mine Workers against the increasing power of the companies during the "80's," a period when corporations and government agencies were bent on undoing the gains of the labor movement and "reorganizing" the mines. For the most part, the miners failed to achieve solidarity or political power, but the movement and a wider context of organizing continued to grow. Today, as the struggle against climate change takes shape, the lessons from this and other movements over the past 30 years should help guide us. In particular, the lessons on how to survive and carry on with dignity despite attacks on our livelihood and the centrality of community should be the foundation for our work. As we confront the greatest challenge our species has ever faced, we should follow the example of the miners in recognizing that our struggle is rooted in the needs of our children and their children. In the words of a participant in the West Virginia strike, "If you're tired of pushing other people's kids in a stroller, come join me on the picket line." Get weekly e-newsletters so you can vote. Follow us on Twitter and like us on Facebook.NASA gave us a great response time to the wake up call of COVID-19! We had already started work on the CENSS mission a few months ago, and after seeing all the international concerns about the virus we decided to shift our focus and quickly complete the mission. CENSS will use satellites to probe the Earth's microwave background, in a similar way as the Planck satellite that went up in 2013. It will go up in a couple of years to gather data from several different sky regions, covering an area of about 1/20 of the Earth. This week is World Meteorological Day, an international holiday to remind us about the importance of weather and climate. It's a common theme that's carried through the NASA community too, who want to help and serve you, the science community, and the planet. With these words on
