

This app allows you to monitor and control every aspect of your PC. It can also record your screen, activate a camera, even record any website that your computer is browsing. This application comes with a simple, fast, and easy-to-use installation, it does not take long to install. And it is suitable for users with no or little technical knowledge. With this software you can check where the files you save are, view your multimedia files, record the website you are browsing, capture your keystrokes, and control all your webcams at once. Besides that, you can also delete the files you want to delete. This application is compatible with Windows 7, Windows XP, Windows 8, Windows 10, Windows Vista, Windows 8.1 and Windows 10. Why do you need a keylogger ? Security is a great concern nowadays, and no one is really happy when their privacy is invaded. A keylogger is an excellent tool to help keep your computer private. You can use it to identify who's looking at your personal information, monitor your kids' activities on social networks and blogs, see if your spouse and/or kids are doing something you don't like, and also check if your kids are looking at pornography. This application allows you to record the websites you are browsing, the files you are opening or saving, the data you are entering, and many other things. This software allows you to capture all the activity in your PC, it also allows you to record all your online activities. Is it safe to use a keylogger ? A keylogger is a very safe application, the only threat is that you might get in trouble, but not from the software itself. If you are using it on your computer, your kids might be able to see what you are doing, but you won't be able to use your computer. This application works in the background and your personal information will never be displayed on the screen. If you are using it on your tablet, smart phone, or other mobile device, you can use it to see what others are doing, see what you're doing and who's doing it. How does it work? One way to think about a keylogger is to imagine the physical equivalent of a keylogger as a computer with a laser pointer that captures everything the user types or sees on the screen
