The struggle over the future of Auckland is about to begin in earnest. When the next election is called, after the September 2020 election, it will be an election on two fronts: a municipal and a regional. In the months leading up to the 2020 election, candidates across the country will be debating the need to reform Auckland. The debate has been framed as a choice between Auckland's city council and the Auckland region. On the one hand we have the city council, which has had its progressive left makeover. That changes the rules of the game — voting on all motions and passing all submissions, changes which have reshaped their competition. There is a bigger problem here, however, as this scenario does not always reflect the power shift that is already happening between the region and the city. One of the biggest issues in Auckland is whether we are the home of a smart city or a dumbed-down city. While it is true that some of the best minds working in Auckland are employed by the city, a great many more are employed by the region. There is an inherent conflict here, as the city's planning system is insufficient for the needs of its growing population. The consequence of this is that city government has been hamstrung by its lack of planning powers. It has been reduced to a role of facilitator. Council continues to provide great service in areas such as rubbish and stormwater collection, but has no authority in areas of planning and management. The result has been the growth of Auckland's exclusionary suburbs, while its city centre, with its civic heart, continues to struggle. It is easy to blame this on the lack of a powerful Auckland council, but the problem is one of city planning and regional governance.
