Facing the risk of unauthorized message interceptions, computer users have become more and more interested in ways to protect their private information and secure data transmitted via the Internet. In Plain Sight is an application that offers a solution to this matter, helping you conceal texts and files inside simple images, which you can then share with others to send your message. Use images as a hideaway As its name suggest, the application is based on the principle that the best hideout is in plain sight. Therefore, it offers you the possibility to embed texts and private files within regular images, that shouldn't raise any suspicions. Relying on simplicity and ease of use, In Plain Sight features an intuitive interface where all the options are one-click away. Using it is easy: you just have to pick the 'host' image (which is previewed within the main window), enter the desired text or select the file you want. Hide texts and files within pictures You can use this application when you want to make sure your text message is not intercepted by others. It enables you to keep your texts or files camouflaged inside an image (in PNG, BMP or GIF format) and optionally protect it with a password, so that no one can access them without your consent. The encrypted image can be then sent via any means to its destination and decrypted in In Plain Sight. If the correct password is provided, the application enables the user to save the file to their computer or copy the text to the clipboard. Send your messages in a secure manner In Plain Sight is a reliable tool for concealing files and texts, helping you make sure that your private data is not illegally intercepted. It can be used with any type of file, but it might crash or fail to encrypt the image if the size of the file is too large.]]> Plain Sight Description 23 Dec 2014 09:28:50 +0000> Plain Sight 2.0 cc6f4944dd

Add keyboard macros for any application. Edit, insert and delete macros on the fly. Key macros will appear in the context menus of your favorite programs. Right-click to run macros or insert them into documents. Keymacro is a small but powerful utility that allows you to program keyboard macros for any application. With Keymacro you can insert macros from your keyboard into any program without having to open the program's menus. For example, you can insert a macro to quickly delete a word or to quickly open a file. You can even insert macros in your favorite editors and other applications. Keymacro has an intuitive and user-friendly interface. It allows you to edit, insert and delete macros on the fly. Keymacro can be used for a wide variety of tasks: - inserting text, numbers and special characters - selecting text and files - saving and loading macros and the corresponding text - copying and pasting text - editing files and URLs - creating and running macros - deleting text, numbers and special characters - splitting long lines - running macros from any program, or a keyboard shortcut, or a task pane Keymacro can be useful for a wide variety of tasks: - inserting text, numbers and special characters - selecting text and files - saving and loading macros and the corresponding text - copying and pasting text - editing files and URLs - creating and running macros - deleting text, numbers and special characters - splitting long lines - running macros from any program, or a keyboard shortcut, or a task pane Keymacro can be useful for a wide variety of tasks: - inserting text, numbers and special characters - selecting text and files - saving and loading macros and the corresponding text - copying and pasting text - editing files and URLs - creating and running macros - deleting text, numbers and special characters - splitting long lines - running macros from any program, or a keyboard shortcut, or a task pane Keymacro can be useful for a wide
