Celsius To Fahrenheit is a lightweight software solution aiming to provide you with a quick way of converting Celsius degrees to their Fahrenheit equivalents. Celsius is a measurement unit for temperatures (also called 'centigrade'), which is included in the International Unit System, being used by the majority of the world to measure heat and cold, both for weather and other scientific purposes. Celsius features 100 levels of temperatures, with 0 standing for the water freezing point and 100 for the water boiling point. Nonetheless, there are still several countries which prefer the Imperial (or English) Units, with Fahrenheit as the most used method for rendering temperature values. This particular system states that water's freezing point is 32 degrees whereas its boiling point is 212 degrees. Fahrenheit is most popular in the United States of America, but other parts of the world as well. Converting Celsius degrees to Fahrenheit is understandably tricky, particularly because the results are generally fractional, making them difficult to equate. Using Convert Celsius To Fahrenheit, you can automatically turn centigrade to Fahrenheit at the simple push of a button. All you need to do is enter the source value in the Celsius section and click on 'Convert'. The application will then immediately display the result in the Fahrenheit field. You can copy this value and paste it in another window, for further work. However, the conversion process is one-directional, so you cannot turn Fahrenheit to centigrade. To conclude, Convert Celsius To Fahrenheit is a useful albeit basic utility working as a temperature converter, that you can use in your work, saving you valuable time in the process.
