After you bought this e-book, you can download either the PDF version , or the ePub version, or both. It's likely that you'll want to get a book reader on your Android device. This can be done in two ways: First. Take advantage of what is offered by Android Market. Second. This will require your "cloud" storage. Perhaps a file in .apk format will be offered, which you can install both on a smartphone and on a tablet or "electronic reader" from your computer. After installation, you will need to "be friends" with the program. It all depends on what type of reader you have chosen. If you have a smartphone, you will have to install the application of the "reading" device and the program for it. If the book is not in epub format, then it is enough to install the program for your reader. If you chose ePublisher, then you don't have to download and install anything, but simply launch the application from the Market and then use it. If you don't know what ePaddt is, you may need to download and install the Textbook program before reading books with your ePad. Further, I will not describe the methods of reading books using the program. For example, I prefer to read from my phone. In addition, I do not yet have a need for this, so this

technique is not relevant for me. Now about what I can recommend to everyone who is somehow accustomed to reading from paper. You can try the schemes described in the article "How to read without errors from a sheet." I have yet to come across texts that are as clear as Professor Rosenzweig does. By the way, he and another writer recommend taking notes from each book, but I'm sure that for now many of you will be more comfortable if you search for text in the text. What do you recommend reading? And is it worth it?
