Microsoft Word is a great document editing tool. It is loaded with all kinds of tools, shortcuts, and features that can help professionals and nonprofessionals alike get the most out of it. open-source alternative to Microsoft Windows' clipboard functionality.

Architecture: The application uses a native x86 Windows API for text copy and pasting. The clipboard interface uses text dialogs, which are stored into system's clipboard as x11/aclpp files. As such, it is possible to expand the GUI interface using any available xterm windows that are still running. Features: - Location of clipboard files (x11/aclpp files) are shown in a sub-tree to the main content tree, which allows the user to navigate their clipboard files

with a standard file explorer.

- Receive, copy and paste both text and images from clipboard files and global text areas.
- Change the number of clips displayed in the tree without exiting the application.
- Quickly copy and paste not so relevant files from a specific folder to the system clipboard, while ignoring some others.
- Copy a small and quick image from a special folder to the clipboard and open it with any available photo editor, while the rest of the image's data remains untouched.
- Copy the current clipboard contents to a new clipboard

file. - Print the current clipboard contents with new image quality, from simple TIFF and PCX files to high quality PDF files. - Save and export the current clipboard contents to ACLP, TIFF, PCX and PDF files. - Try Alternate Memo from the current directory from a command line without exiting the program. - Interface for keyboard-only users. - Copy/Paste buttons for accessibility needs, as well as ALT key-only users.
