As of right now, a 5,300-year-old skeleton in an Ohio attic is believed to be that of a woman and the oldest ever discovered from the Clovis culture. (My post on the news is here.) However, there are two problems. The first is that the story is reported as being confirmed by the Smithsonian Institute. They've probably said that a couple of times already. A famous debunking of the Smithsonian story is here. Obviously, the debunkers have a lot of professional interest in the story. They shouldn't be dismissed so quickly. The second problem is that the skeleton is being described as having 30 separate cranial deformation scars that may indicate either a late matriarchal society or an early warring society with a male head-binding tradition. Wait! What? Is the Smithsonian

PGPTool is a shareware application that can help users protect their sensitive data. Thanks to PGP encryption, you can make sure that none of the information your visitors can see while browsing through your articles is revealed to others. Not only does it let you protect your data, it also provides the means of easy decryption in case you need it. You can store your password to a specified location, and the utility also allows you to edit the list of recipients. All this only to name a few of the features you can find when using this encryption tool. PGPTool installation: In order to install this program, you must first download it from the official website. If you choose to install it from there, you will need to make your choice in two steps. To begin with, you will have to specify your account, after which you need to select your preferred language. From then on, you can configure some preferences and launch the application itself. After that, you need to provide the license key that was provided to you after the first step. For completion's sake, you need to then choose whether you want to save the key or export it to a file. After that, you will have to type your desired password, with you being asked to confirm it once you start the encryption process. PGPTool installation fails: If you failed to launch the process, you will need to check the installation manual that you received after you clicked the button "Next". Once you have downloaded the program, it is essential that you launch it with the "Run" button. The utility will now ask you to specify the information it needs, including the location of your license key. PGPTool application: Once you have entered your password, you can start the encryption process. During this phase, the PGP utility will ask you to browse for the documents that you wish to protect. You can select them from a list and then enter the save location and password. Once you have chosen all the desired options, hit the "Encrypt" button. Not only do you specify the name of the target folder, you also have the ability to edit this location. To do so, you will first have to set the mode of the encryption as well as select the information to store. After choosing that, you will then need to save the files by specifying the save location. You will also be able to browse the target folder to find all the files after you

Antivirus, Software Update and System Manager Secure Solution for Protection of System and Its Files from Viruses, Worms and Spams There is no doubt the current antivirus softwares are being improved continuously. Each day, there are still hundreds of new antivirus softwares that appear on the Internet. Their price is extremely high and they may become heavy on your system resources. Most of them come with additional features. So, if you do not need their additional features, you may opt for using only a single antivirus software that has less features. This will not affect you in a bad way because all the features of the antivirus software you are using are covered by that single antivirus software you installed in your system. You will also need to keep updating your antivirus software regularly because some virus might have found its way to your system and it is important to keep your system updated. System Manager / Hardware Management As the name of software suggests, its aim is to take care of the hardware / system management. It will help to install, uninstall, update and manage all the software's and applications properly. It will also help to optimize the performance of your system and tune it according to your demand. It will also help to recover and fix any un-repairable problem in the system. Most of the time, a problem in the system is reported due to software / application that has not been installed, update properly or having some error in the installation or installation procedure. So, after the installation of System Manager, you can find those items under the "System". System Manager is a powerful utility that needs some time to load. It may take up to 5 – 10 seconds. Once this process is complete, it will show all the items in the "System" section. System Manager will help you to manage all the software and applications properly. For example, you can see all the software / application installed in your system, installed updates,
