It was originally programmed in Autodesk Graphics. AutoCAD LT is the flagship program in the AutoCAD family, and is the only application to support both vector and bitmap modes of operation. Vector-based applications, including AutoCAD LT, were originally developed to provide a method of representing features with the simplest outlines for computers to render, while the higher-level bitmap-based applications were developed to provide the ability to provide more complex displays. The Application Programming Interface (API) for AutoCAD was originally created by BSDI (since acquired by Autodesk) in 1982, and was a way to automate the creation of standard drawings and model by third parties. This was important for the development of third-party AutoCAD plugins

for the Windows operating system. The AutoCAD API allowed users to create custom AutoCAD extensions. Many third-party products were developed to help AutoCAD users automate various processes in order to perform common tasks, such as precision detailing, large-scale design, and the creation of visualizations.
