QPass is a password manager and information organizer. Step 2: Import and Export Data QPass 0.3 Create your own account using an approachable interface Most of us save sensitive data in simple documents, which can be accessed, without too much effort. However, it's recommended to spend a bit of time to find a suitable app to keep records,

which can be secured with a powerful encryption system, or at least a login mode. QPass is one of the many tools that provide such options and comes with a private database. It's wrapped in a minimalistic and user-friendly layout, consisting of a single panel with a record list on the left, and a small editor on the right. If you used the tool before, you can import your data from the computer, or create a new one, if it's the first time. You need to select the destination path and the password. Make sure you remember it, as you won't be able to access the app, nor reset it. Insert entries with ease and

generate custom passwords The process is not complicated, just press the Add button, and fill in the relevant information, based on the subject. The offered fields are full name, website URL, which can be copied to the clipboard or accessed, along with username, password, and optional notes. The entries are displayed in the list and can be easily found using the search bar, above the list. Plus, it's possible to sort them in ascending or descending order. QPass also comes with a basic password generator, where you have the option to pick the maximum length, and include small,

big and special characters. A handy function is the ability to enter a custom number of iterations, which improves the resistance to brute force, and raises the time taken to hack the data. On an ending note Taking everything into account, QPass is a useful and accessible application created to offer a simple and secure way to enter and store various private info, like games, apps or software accounts, or websites authentication credentials. The built-in encryption system provides additional protection from unwanted people.
