Nixory Free

* The application is compatible with Windows XP, Vista, 7 and 8 * The application can be used on the 32-bit and 64-bit versions of Windows. * The Windows XP, Vista, 7 and 8 application may be either a stand-alone application or may be integrated with the other applications. * It can be automatically run from the Windows task bar. * The Nixory installer includes PythonPyGTK program. * The PythonPyGTK has been tested on Windows XP, Vista, 7 and 8 and it works correctly. * PythonPyGTK

is compatible with Windows XP, Vista, 7 and 8. * PythonPyGTK application can be embedded in many applications such as Mozilla Firefox, Google Chrome and Internet Explorer. * Nixory keeps the page from being cached and is capable of detecting any malicious active scan. * The application has been created to help users to work in a more secure and safe environment. * It prevents them from data mining, cookies, and pop-ups. * It has a completely free installation and it can be set to run automatically. * Nixory is a PythonPyGTK program. Readme First! Nixory is a powerful anti-spyware

program, which protects Mozilla Firefox, Google Chrome and Internet Explorer from dangerous spywares, and harmful cookies. Nixory is a PythonPyGTK program. It protects the user from malicious data mining for the Mozilla Firefox, Google Chrome and Internet Explorer browsers. There are many kinds of data miners. The most common are malicious cookies that slip from Internet web sites (often from banners) to a 'Container,'usually a file. Thanks to a fast and accurate scan, Nixory will find (if there are) tracking cookies and it will completely remove

them. To install Nixory, you absolutely don't need to uninstall other anti-spyware, anti-virus, etc. applications because Nixory doesn't edit the system registry or a live process. Overall, this application aims to be a powerful, fast, multi-platform and open-source program that can protect a mature and secure browser. Nixory Description: * The application is compatible with Windows XP, Vista, 7 and 8 * The application can be used on the 32-bit and 64-bit versions of Windows. * The Windows XP, Vista, 7 and 8 application may be either a stand-

What's New in the Nixory?

Description Nixory is a PythonPyGTK program. It protects the user from malicious data mining for the Mozilla Firefox, Google Chrome and Internet Explorer browsers. There are many kinds of data miners. The most common are malicious cookies that slip from Internet web sites (often from banners) to a 'Container,'usually a file. Thanks to a fast and accurate scan, Nixory will find (if there are) tracking cookies and it will completely remove them. To install Nixory, you absolutely don't need to

uninstall other anti-spyware, anti-virus, etc. applications because Nixory doesn't edit the system registry or a live process. Overall, this application aims to be a powerful, fast, multi-platform and open-source program that can protect a mature and secure browser. Features: Protection from malicious data mining of Mozilla Firefox, Google Chrome and Internet Explorer browsers Automatically removes tracking cookies, redirecting pop-ups, and malicious ads Very high speed - it works approximately 1.5x times faster than other anti-spyware tools Very simple and intuitive GUI

Compatible with Windows OS: XP, Vista, 7, 8, 8.1, 10 Compatible with Linux OS: Ubuntu, Mint, Manjaro, Debian, Fedora, Arch, CentOS, Suse It has a dual architecture (native and portable) which means that Nixory has no system requirements. The runtime is a compact.exe file and does not include any installations. Nixory is a universal program that protects all kinds of Internet browsers: Mozilla Firefox, Google Chrome, and Internet Explorer. Nixory's algorithm can perfectly detect and remove all kinds of malicious files and objects. If Nixory detects any

malicious files or objects, it will remove them completely. Nixory uses the following detection methods: The user mode hooks can be used to get deeper insight into the registry The active process is monitored to detect malicious processes The host file is used to detect the suspicious websites Nixory uses its own database that stores information about suspicious elements The malicious files and objects are scanned thoroughly and the results are verified The User interface uses the PyGTK framework to make the software as light as possible and as simple as possible Nixory makes

use of several parts of the OS. For example, the Nixory library uses only native function calls to work. Nixory's library is portable, meaning that the program doesn't have to be installed on a machine and it can work on all operating systems. Mozilla Firefox, Google Chrome and Internet Explorer If you are using one of the popular Internet browsers, you need to install Nixory. Otherwise, your browser will be unprotected. Nixory
