DNA topoisomerases are responsible for maintaining genome integrity and facilitating the orderly growth and transcription of DNA. Topoisomerase II (Top II) is unique among all topoisomerases because it is the target of two generations of antimetabolic chemotherapies, topotecan and irinotecan, that have been used extensively in the clinic. Many characteristics of the Top II binding site have been studied, and this knowledge has been used to aid in the design of compounds with greater potency and selectivity. It is becoming increasingly clear that each step in the catalytic cycle, from drug binding to cleavage-rejoining and relaxation, is important for drug activity. This understanding may lead to the development of novel Top II-targeted drugs with a broader spectrum of activity. com.apple.developer.networking.vpn.Q: How can I count the number of objects in a plist file with Swift? I would like to read the plist file and show the number of objects in the file. Currently I have this code: let plistPath = Bundle.main.path(forResource: "Product", ofType: "plist") let products = NSDictionary(contentsOfFile: plistPath!) as! [String:AnyObject] But products is a dictionary and I want to know the number of objects, for example, I want to have the number of "Product" inside my.plist. I tried to use count function but it does not work. A: You can simply get the array count from your dictionary let products = NSDictionary(contentsOfFile: plistPath!) as! [String:AnyObject
