You can skip forward or backward and explore the overall progress. The elapsed time is also displayed in order to get more information. Void Linux, the Debian-based Debian-variant, has released version 2.5 of its LiveCD. The development of Void is very similar to that of Debian Unstable and it is also based on Open Source technologies. With Void, you can run a variety of Unix (or Linux-based) OS's on a Linux LiveCD. The LiveCD is intended to be run off of a CD-ROM or flash drive. With the installation of Void and by running Void-Init, the developers will be able to create a fresh instance of their own distro based on Void. The latest Void LiveCD version 2.5 includes the following enhancements: the functionality to accept packages from a file system on a USB or network (via the live-net) the ability to boot Void off of a file that is on a local hard-drive a new file management system that works better than the one found in Void-Doc a new GTPART utility to partition the disk, split an existing partition, or merge an unallocated partition into an existing partition mke2fs 2.12, a new tool for creating partition tables Last time we checked out Void it was at version 1.16. If you were looking for a Debian-based Linux distro that is based on the old stable version and is still being worked on, then this release of Void might be for you. Download Void (via torrent here) and give it a spin. Molecular genetic analysis of a child with a T-cell prolymphocytic leukaemia. The clonal nature of a T-cell lymphoproliferative disorder in a child was demonstrated by molecular genetic analysis of rearranged T-cell receptor genes. DNA sequence analysis of the T-cell receptor gamma chain variable (V gamma 9) gene demonstrated an identical clonal rearrang
