There are many online tutorials that can help you get started and get the most out of the software. How do I get started? The first step is to get Photoshop installed on your computer. This can be done through the Mac App Store on a Mac, or through Photoshop Elements or the Adobe Creative Suite on a Windows or Linux machine. "If you decide you no longer want to do that then you have my permission to leave." "I'll never leave, Amy." He tells me with the same hope, that I can change my mind as I tell him I'm not going to change my mind no matter how much he begs. He's about to kiss me again, and I won't resist. This book is half finished as of the last upload. The next chapter will be up later this week. I plan on finishing it up by the end of the month. I'll let you know when it's up. ?10037?

Brushes There are many kinds of brushes, from the very basic "Brush" brush to more advanced "Shader" and "Spatter" brushes. Some are not all that fun to use while others can create very eye-catching images. The Brush is the most basic brush and works by selecting objects in the image, using various settings, and then painting these selections out over the rest of the image. Brushes can be controlled with the "Eraser" or "Magic Wand" tools. The Eraser tool is used to remove objects from the image without creating a new selection. It works like a magic wand, touching the edges of the object and selecting them automatically. The Magic Wand tool is like an Eraser, but with more settings and options. It's a quick and easy way to select objects in the image. The Color Picker is a tool that allows you to select a specific color from an image. It's a handy tool when combined with the "Fill" tool to set the color in a specific spot in the image. The Gradient tool works by selecting a color and setting the color that is used to blend colors. Blending allows you to select two colors and combines them into one color. The "Color" effect is the default effect of the Gradient tool. You can change the color of the gradient by using the Settings dial (see below.) There are other options such as "Luminosity" and "Opacity." The Spatter brush does what it sounds like -- it sprays out a brush using paint in a wide arc. The Spatter brush does not act as a selection tool, it's just a way to lay down a coat of paint. The Shader brush works in much the same way as a basic brush, but with additional settings. The settings vary from image to image and you can find a really great collection of settings by searching online for Shader brushes. The Eraser brush, also called the Paintbrush, is used to paint with color -- much like the Spatter brush. It will fill up with paint until no more paint is available. The settings are controlled by the Paintbrush tool using the Settings dial. The Waterbrush works exactly as its name implies: with a slow, controlled wave of the mouse, you can create natural-looking water. With the Waterbrush, you have control over the shape, size and location. The Pen tool allows you to draw lines, shapes and paths to form objects
