Thanks to everyone who helped me to get my z5 working with the custom kernel. i have tried to flash the new 4.3.1000 kernel to the z5 from sdcard but unfortunately it does not work. i followed the instructions but when i unlock the phone i get a screen without a bootloader. the phone has the new 4.3.1000 kernel but for some reason it is not activated in the kernel list of the initial menu (which has

nothing to do with the bootloader). it is on at least and working correctly. but im unable to get it in the kernel list. does anybody know how to enable this kernel or to be more precise, i need to know how to install the sdcard zip.zip with the kernel on the internal storage (which is the problem i am having) and how to use the back button or any other button from the uper and downer menu to boot into it. is there anybody willing to help. thanks.
