Today I want to share with you some cool Photoshop tips and techniques that can be used to speed up your workflow and save time. The list contains the most useful Photoshop tips that I have tested over the years. The desktop version of Photoshop and Elements is a great tool, but your workflow will be much faster with the web-based Photoshop CC and Elements CC. You can download them for free or take a look at our guide on how to switch to the cloud app on Windows 10. Note: I only cover the techniques in the desktop version of Photoshop and Elements. In the meantime, I'd like to remind you that the list of Photoshop tips and tricks I am sharing on the site has been updated many times over the years. Sometimes it's worth re-visiting the articles to see if there are any new tweaks that would be more useful for you. Tip 1: How to use Photoshop or Elements with an E-Reader Whenever I'm designing images for my blog posts and want to work offline, I turn on my E-reader and Photoshop Elements. This way, I can work on images in a free, offline version of the program. It's a great way to work quickly. When I'm done, I can easily send those images to my website (or to any other design) because they are saved as JPEGs. If you don't want to work offline or if you prefer to use the software on a Mac, I'd recommend downloading Adobe Bridge. Image: Shutterstock While you can do a lot of great things with Photoshop Elements, the biggest limitation is the lack of a RAW editor. Tip 2: Turn off auto-save and enable Layers Whenever you begin working on an image in Photoshop, turn off the autorwop switch and enable the Layers switch. Then, whenever you want to save the file, you should name it. Then press Enter or Return when asked to name it. This way, it will be much easier to find the image later and change its name for another image without having to scroll through your library. Tip 3: Use layers to create a mask It is hard to remember the exact names of each layer you are working on. Instead, use a color or filter to define which layers are in use and which ones are not. For example 05a79cecff

Treatment and management of scaphoid fractures. Scaphoid fracture is a common injury, and there is no single unified practice for treatment. The purpose of this article is to review the diverse treatment and management of scaphoid fractures. The review considers the anatomy of the scaphoid, the pathophysiology of fracture pattern and location, the factors that influence prognosis, the principles of treatment, and options for fixation. The optimal treatment of scaphoid fractures has yet to be established. Techniques include cast immobilization, traction or angulation reduction (reduction), percutaneous pinning with either a cannulated or lag technique, external fixation, and open reduction and internal fixation with either a Kirschner wire, tension band wire, or screw fixation.

Q: How to change image when user clicks on it or other link  
The user clicks on the background image of a link, so it changes color but when the user clicks on another link a different image will be displayed i tried this: HTML: JS: `$(document).ready(function(){

}); });` Second way is by using data attribute. in the

The Hard Round Brush The Hard Round brush is ideal for painting and retouching. You can change the hardness, size, shape, and blending options by using the Shape options, which are found in the Tools panel. 1. Choose Hard Round Brush from the Tools panel's Brush pop-up menu (see Figure 8-1). The square that appears at the bottom of the Brush box is still there, as are all the other brushes from the Brush pop-up menu, but there is now a hard round brush. FIGURE 8-1: Use the Hard Round Brush to paint images. 2. For a hard brush that paints its way from its center outward (like a radish), choose Diameter/Radius and enter **11** for the Radius value. Then, in the Shape section, increase the Hardness setting to 3 for a firm paint. 3. The Brush box is now ready for action. If you want to hold the brush off to the side to paint or retouch a small area, click and hold the left mouse button, and drag the brush onto the image window. If you want to paint or brush a longer stroke, click the left mouse button, and then continue to paint or brush as you normally would. The brush size remains the same as before, but now you have the advantage of pushing it toward and away from the center of the image. If you want to paint a dab or two, click and hold the left mouse button, drag the brush to a new location in the image, and then move the mouse slightly to one side or the other. You can adjust the size of the paint as needed.
