In the battle between MySQL and PostgreSQL, a lot of posts states that PostgreSQL is great for high-performance applications. This doesn't seem to make any sense to me though. I work with both SQL Server and PostgreSQL and I really see no reason to use PostgreSQL instead of SQL Server when it comes to performance. On the contrary, I believe that SQL Server is pretty good for this as well. I understand that it is possible to write faster code for PostgreSQL than for SQL Server and I agree with that, but I am puzzled about the whole performance gap between PostgreSQL and SQL Server. How is PostgreSQL really better than SQL Server? A: The "performance" claims you point out are quite irrelevant when you're talking to a database -- you buy the
