Here's a video overview of HyperMotion technology: This technology has been tested with help from top FIFA World Cup® teams. You can read their individual analyses [here](#) and, for comprehensive information about FIFA technology, you can read the FIFA video manual [here](#). "We're excited to be able to share more about our new FIFA HyperMotion Technology," explained Alex Lowy, FIFA Lead Designer. "The goal is to develop new, dynamic gameplay while maintaining the game's already impressive realism. With our custom engine development, we are able to create features that deliver a completely new experience to fans around the world." FIFA 20 introduced an overhaul to the player models used in the game. The "Fantastic Four" (Juergen Weck and Michael Weck, EA Vancouver) are a team of artists and designers who are dedicated to making the player models look the most realistic on the PlayStation® 4, Xbox One and PC. They've partnered with the best professional players in their respective national teams to create detailed player models in FIFA 22. With this partnership, the quality of the game and the authenticity of the player models have become even better than before. You can read the details [here](#). FIFA 20 introduced the use of a new engine that runs faster, smoother, and with better visual effects than previous games. FIFA 22 will introduce a completely new engine, which will run even more smoothly and allow for many new features for players to interact with the in-game environment. You can read a detailed technical overview [here](#) and you can read our release notes [here](#). "The first games that we would make with this engine were FIFA and Madden, and the technology was extremely powerful. To be able to update this engine in the time we have was not something we would even consider possible. All of the technology in there came out of one of my 'why should we do it' moments, and the new engine is the result of that technology," continued Alex Lowy. "It gave us the space and time to create new gameplay elements and new game modes, and to make the new engine as good as possible to allow us to support all of the new features in FIFA 22." Developing great gameplay on the go is a key goal for Alex, and one that he will achieve through the use of new technologies such as

Barbarian Knives & Weapons Armor The Barbarian class is about raw muscle and skill. To reflect that, most of their gear is physically heavy and fits together in a

---

way that leaves little to no openings for stealth and hidden attacks. Despite that, some weapons and armor are able to be used without issue by stealthy players or for surprise attacks, or just to make the Barbarian more fun and menacing. This guide will cover the basics on how to craft all of the Barbarian's basic gear. It will be divided by weapon and armor.
