What Is Photoshop? Photoshop is a raster image editor. This means that it manipulates the pixels of an image, not the image's information. When working with Photoshop, you're working on a raster-based image, which comes in JPEG, TIFF, and Photoshop (.psd) file formats. Photoshop provides four main functions: Creating a new raster image—to take a photograph and apply your own creative edits. Image mapping—to add, remove, or color change an existing image. Scaling—to increase or decrease the size of a raster image. Filters—to add special effects, such as blurring, sharpening, and lens flair effects. Note: These are the most common uses of Photoshop, but depending on how you're using it, the features may not be the most useful. Photoshop offers a large set of basic image tools. These tools are called the Image Adjustments panel. You can add or remove objects, change the saturation or color of objects, and change the lighting of an image. These tools are found in the Select tool area. The palette of colors can be found here and is accessed by clicking the color wheel icon. The following image shows the Photoshop Select tool palette. Tools Are in the Select Tool Area? Photoshop can be a clunky, somewhat unintuitive program. It is easy to get lost in its many layers of features, and it's easy to lose track of your image. Although the tools are important, the most important tool for beginners is the Selection tool, located in the left side of the Select tool area. This tool allows you to select and manipulate objects. The Selection tool is also the most easily accessible tool in the Select tool area. The following image shows the Selection tool area. (illustration: TopazCharts) Because the Selection tool has its own color palette, you can easily tell what tools are being selected. Although you may not see the colors, you can tell that objects have been selected. There are many tools that can be added to the tool palette to perform different tasks. You can choose to add or remove tools from the tool palette. You can add or remove tools by clicking and holding a tool and moving
