* The original Photoshop was first released in 1987 for the Macintosh. It was the first professional-grade digital imaging application, and quickly became popular for creating images. The name of the software came from the fact that it used the same photo-editing technique on images that were developed in the early days of the computer, known as "photo-paint" and "paintbrush." See the upcoming "Photoshop basics" sidebar to learn more about this.

In this collection, I have assembled a list of the best Photoshop plugins for Mac. We focus on plugins because they add specific features to Photoshop and can be used with Photoshop very easily, unlike extensions which add various features to third-party applications. These plugins can make your editing a little easier, faster, or just more fun. Best of all, the plugins included in this article are entirely free. Most have no monetary cost to the user (as of this writing), and some are even free for the basic version of the application. Also, if you use the plugins in this article and come across any bugs or any issues, please let us know. The Poetry of Unnatural Selfishness The Poetry of Unnatural Selfishness is a 2007 work of short fiction by American author James Salter. The story follows the natural, unplanned evolution of a relationship of the main character, a woman named Edna. Their relationship starts slowly, but eventually Edna becomes uncomfortable with all her partner's demands and demands, eventually breaking up with him. The story has been described as a perfect expression of "postmodern" literature. The novel won the 2007 National Book Award for fiction. I have set system monitor to only show "CPU", however I noticed that this is not so useful for me as it doesn't show the CPU usage for the individual processes. Are there any tools, even just in the command line, that can show me the usage for all processes, grouped by which process is consuming the most? A: You can do this. Lets assume you have 10 processes id 1 - 10. To list all processes running on current host, run this : ps aux | grep -o '\ ' To list them by CPU% per pid. ps aux | grep -o '| awk '{ print \$1, "%.2f%"}' To list them with cpu+mem. ps aux | grep -o '| awk '{ print \$1, (\$2-0.1*\$2) "%.2f%"}' A: Not in the default Ubuntu distribution. However, you can run: top -b to show the processes in a bar graph. More information can be found in man top. A: This tool will give you a graphical representation of your processes' resource usage. The CPU usage displayed will be for the listed processes, as well as the CPU time spent in the listed processes (measured in milliseconds). L.A.
