Chilkat Zip Self-Extractor is a powerful tool that lets you create self-extracting ZIP files with a strong encryption system. Some experience is required for advanced management Especially aimed at users who want to make sure that no one

manages to access the compressed data, the program seems more appropriate for those with more computer experience. Truth is, Chilkat Zip Self-Extractor was developed to be easy to use, so it boasts a plain and simple GUI, but the available options may get rookies in trouble. Comes along

with encryption options For example, you initially need to input the path to the ZIP file and provide the executable file you want to run after unzipping. There are some options too in order to delete file after launching this executable file and auto-select temp folder for unzipping. The

encryption system however is much more important. If you wish to take the most out of the AES encryption engine, there are three options at your disposal: 128 bit, 192 bit and 256 bit, with a dedicated field to input a password. Additionally, Chilkat Zip Self-Extractor requires users to input the hard-coded unzip

directory, default unzipping folder, icon file, URL and output executable. Configuration profiles can be exported and imported for a seamless process, but there's not help manual available, which is one of the major drawbacks. A few last words As a conclusion, Chilkat Zip Self-Extractor

can help a few professional users, but in order to target a larger "audience", it still needs a bunch of improvements. A wizard for example could help a lot, especially because the whole program needs to be more user friendly. ... option for linked folders. I want to create a zip file

containing.txt files and a.xlsx sheet in the root folder and the "folder" they come from to the.zip file as a part of it. How do I do that? I have a few jars in the project. I want all of them in a single file, but if I import it as source jar, and if I try to save it as zip, the ZIP contain only the classes of all of these

jars. How can I solve this problem? I have a game in java and i am planning to convert it into android app. Now I have planned two types of app. In first type the app would be update version of app like facebook app or tw
