\* **\_GIMP (GNU Image Manipulation Program)\_** GIMP is a free, open-source digital image editing program that runs on many operating systems. However, it is not as widely used as Photoshop, though it is used by many graphic designers and independent artists. \_\_ # Chapter 7. Creative Web Design # The Basics Web sites are dynamic. These days, web designers spend most of their time keeping up with new technologies that can alter the look and feel of a site. It's a hectic time on the West Coast. At the same time, the West Coast is exactly where the latest creative trends are being blown in. Tentative technologies are coming to the fore in the design world. On the Web, the trend toward **\*\*Flash\*\*** is growing, and **\*\*Java\*\*** is gaining more supporters as Flash becomes more affordable and widespread. The recent arrival of adaptive **\*\*RDF\*\*** ( **\*\*Resource Description Framework\*\*** ) and other emerging technologies such as Adobe's **\*\*R\*\*** **\*\*XML\*\*** and Google's **\*\*XML\*\*** and **\*\*XHTML\*\*** form standards give web designers even more possibilities than ever before to create web sites that are both dynamic and stylish. Today, even if a web designer is skilled in Photoshop or Illustrator, she will often have to do some HTML coding to make her design changes. This isn't always the case, however. The new HTML standards that have emerged — or are about to emerge — along with the availability of different available **\*\*client-side programming\*\*** languages such as JavaScript and **\*\*Flash\*\***, enable designers to create web sites with minimum knowledge of HTML or CSS. The end result is a chance to put creative design to use. Web designers who take advantage of this opportunity often make quite interesting sites. # Flash In this book, we've talked about **\*\*Flash\*\*** in many places. Flash is becoming an increasingly popular method of creating dynamic web pages. For more information about this, visit the **\*\*Flash\*\*** **\*\*web site\*\*** at \_\_. ## Creating a Flash Web Site You can create a Flash Web site in two ways: 1. Design it in a tool that generates Flash files for you and then uploads them to a web server (such as Dreamweaver, Flash Catalyst, Adobe Flash, and so

Adobe Photoshop Elements includes basic features like resizing, cropping, red-eye removal, basic corrections, straightening, colour/toning, and adjustments like brightness, contrast, and saturation. You can also create black-and-white images, work with layers, save files in the.png and.psd format, create.psd-movies, and more. An additional benefit is that Adobe Photoshop Elements is compatible with Windows and Mac. You can run Elements on Windows 7, 8 or 10 and macOS High Sierra, Mojave and Catalina. Adobe Photoshop Elements comes with a number of features

Minimum intraocular pressure threshold during cycloplegia for DMT accommodative esotropia. A subgroup of patients with accommodative esotropia have significant variation of the accommodative distance from near to far. The DMT accommodative esotropia test requires that accommodation to near be maintained and assessed at near, and that near accommodative convergence to induce maximum esotropia at distance. If a discrepancy exists between these 2 tests, it should not be categorized as DMT accommodative esotropia. The purpose of this study was to establish an intraocular pressure (IOP) threshold for the DMT accommodative esotropia test. A retrospective chart review of all visits for patients with DMT accommodative esotropia examined between June 2014 and May 2015 was performed. All patients had at least 1 visit with a primary symptom of near diplopia. Mean clinical manifest refractive and IOP before cycloplegia and after cycloplegia were compared. A total of 16 patients (14 female) with a mean age of  $19.5 \pm 6.9$  years were identified. IOP before cycloplegia ( $15.4 \pm 3.2$  mmHg) was not significantly different than that after cycloplegia ( $16.0 \pm 2.8$  mmHg;  $P = .22$ ). No statistically significant difference was found in IOP between fellow eyes with the dominant eye having a lower IOP ( $P = .32$ ) or greater IOP change ( $P = .62$ ). When patients were stratified by average accommodative demand, the IOP threshold was  $18.4 \pm 4.2$  mmHg. No significant difference was found in IOP during cycloplegia between patients with 0 accommodative demand ( $16.0 \pm 3.0$  mmHg) and those with up to 18 accommodative demand ( $15.9 \pm 3.0$  mmHg;  $P = .33$ ). There was no significant correlation between IOP change and accommodative demand ( $P = .08$ ). The DMT accommodative esotropia test can be successfully performed with a cycloplegic IOP threshold of 18.4 mmHg.
